Dosing table

Body weight	Tramadol 20 mg	Body Weight	Tramadol 80 mg
1.25 kg		20 kg	
2.5 kg		30 kg	
3.75 kg		40 kg	
5 kg		50 kg	
6.25 kg		60 kg	
7.5 kg			
10 kg			
15 kg			

 = ¼ tablet
  = ½ tablet
  = ¾ tablet
  = 1 tablet

Tralieve 50mg/ml solution for injection

- Administered by intramuscular or slow intravenous injection with similar onset time and duration of action by either route³
- Onset of action within minutes³
- Reduces MAC of sevoflurane⁴
- Shows good evidence for effective analgesia⁵
- 2-4 mg/kg (0.04-0.08ml/kg)

Dosing table

Body weight	Tralieve Injection dose volume (4 mg/kg)	Body weight	Tralieve Injection dose volume (4 mg/kg)
5 kg	0.4 ml	15 kg	1.2 ml
10 kg	0.8 ml	20 kg	1.6 ml

Additional analgesia can be achieved by increasing the Tralieve dose until the maximum daily dose is reached or by following a multimodal analgesic approach with the addition of other suitable analgesics.

Individual results are variable so monitor response carefully.
